CONTENTS

Volume 30, Issues 1–6

International Journal of
MATHEMATICAL EDUCATION in SCIENCE and TECHNOLOGY

Issue No. 1, JANUARY

Articles

To what extent can National Curriculum tests in mathematics inform and guide teaching? S. JENNINGS, N. PRICE and K. PANKHURST 1

On the reversion method for the approximate solution of non-linear ordinary differential equations W. ROBIN 11

A straightforward proof of Roth's lemma in matrix equations A. J. B. WARD 33

Difficulties in knowledge integration: revisiting Zeno's paradox with irrational numbers I. PELED and S. HERSHKOVITZ 39

Attitudes of engineering students to mathematics—a comparison across universities C. T. SHAW and V. F. SHAW 47

The solution of differential equations using numerical Laplace transforms A. DAVIES and D. CRANN 65

Exploring the 'Birthdays Problem' and some of its variants through computer simulation S. RELF and D. ALMEIDA 81

Thresholds in a class of iterative maps H. P. W. GOTTLIEB 93

Unfolding interrelations between mathematics and physics, in a presentation motivated by history: two examples C. TZANAKIS 103

Classroom Notes

A physical interpretation of counting formulas and their comparison with each other Ö. BAYTEKIN 119

Final value theorem in number sequences Y. K. HUEN 121

Lebesgue integral defined in the manner of Riemann A. ABIAN 127

Some areas associated with Pythagorean triples P. W. HAGGARD 130

A generalized Kronecker product and linear systems J.-J. MARTÍNEZ 137

On a surprising covariance identity E. MARCHAND and É. LAMONTAGNE 142

The notion of *type*, as regards certain geometric limits P. R. MERCER 146

Numerical tetrahedra with 'the seven averages property' D. RIMER ... 149

The finite difference mesh on an air-to-dielectric interface S. Scott and B. W. Lim 151

Summing series with Laplace transforms W. A. Simpson 155

Issue No. 2, March

Articles

Visual aspects of understanding group theory D. F. Almeida 159

State reduction in a Markov decision process T. J. Sheskin 167

Teaching biostatistics to medical students and professionals: problems and solutions H. Sahai and M. M. Ojeda 187

Estimating logarithms with College Algebra students R. Kreminski 197

Mature students studying mathematics K. Hirst 207

Undergraduate perceptions of teaching of a first course in business statistics L. G. McAlevey and A. F. Stent 215

Assessing academic and creative abilities in mathematics at four levels of understanding N. L. Livne, O. E. Livne and R. M. Milgram 227

Rational Ball curves H. L. Tien, D. Hansuebsai and H. N. Phien ... 243

Order analysis in sequence algebra Y. K. Huen 259

Announcement 270

Classroom Notes

Linear simultaneous differential equations with constant coefficients F. Chorlton 271

A relationship between the Laplace and Fourier transform, via the Hilbert transform J. M. H. Peters 274

How to avoid implicit differentiation D. E. Dobbs 276

The solution of a polynomial of degree 4 F. N. Nwobi 280

An algebraic proof that polygons have less area than the circle with same perimeter M. Mahmood and P. Edwards 283

Continuous almost everywhere D. C. Biles and J. S. Spraker 287

Computing square roots fast: illustrating the cubic order of convergence R. Howell and J. Mathews 289

Stationary and equilibrium points—a critical connection P. Glaister 294

On the eigenvalues of 3×3 magic squares G. Trenkler 307

Some examples of teaching with computers M. Fernández, M. A. González, G. Rodríguez and A. de la Villa 309

Issue No. 3, May

Articles

Dispositions of college mathematics students D. C. Royster, M. K. Harris and N. Schoeps 317

A necessary condition for a quadratic form to have a chi-squared distribution: an accessible proof A. I. Khuri 335

Finite and infinite sets: definitions and intuitions D. Tirosh 341

Mathematical problem solving in support of the curriculum? D. Holton, J. Anderson, B. Thomas and D. Fletcher 351

Learning by design: undergraduate scientists learning mathematics R. Noss 373

Conceptions and images of mathematics professors on teaching mathematics in school E. Pehkonen 389

CAI and the reform of calculus education in China X. Lang 399

The particle in a box with a perturbation F. M. Fernández 405

Global error bounds for product cubature rules H. V. Smith 413

Classroom Notes

A new regression algorithm using the least squares method W. Sabry 419

The shape of the binomial density function A.-L. Wang 422

The method of undetermined coefficients produces Taylor polynomials D. E. Dobbs 425

Some inequalities and sequences converging to e M. Mahmood and P. Edwards 430

On some sets associated with the Cantor ternary set P. Samuels and M. Samuels 435

A simple calculation of the Riemann zeta function of some even integers Y. I. Salamin 442

On the analysis of a population model subject to nonlinear harvesting B. Bradie 446

On the roots of quadratic equations and the first passage time of Brownian motion I. D. Homan 452

The mean value theorems of Lagrange and Cauchy J. Tong 456

Mechanical curves—a kinematic Greek look through the computer S. I. R. Costa, M. A. Grou and V. Figueiredo 459

Another functional equation related to the trigonometric functions A. G. Shannon, A. F. Horadam and R. P. Loh 468

Issue No. 4, JULY

Simulations on spreadsheets for complex concepts: teaching statistical power as an example T. R. BLACK 473

The use of computer algebra software in teaching intermediate and college algebra L. J. STEPHENS and J. KONVALINA 483

The impact of the graphics calculator on the assessment of calculus and modelling M. ANDERSON, L. BLOOM, U. MUELLER and P. PEDLER ... 489

Essential mathematical skills for undergraduate students (in applied mathematics, science and engineering) S. I. BARRY and S. DAVIS 499

Demonstration of systematic improvements in application of the variational method to weakly bound potentials W. N. MEI 513

Generalizations involving maltitudes M. DE VILLIERS 541

The vector cross product in $\mathbb{C}^3$ J. GROSS, G. TRENKLER and S.-O. TROSCHKE 549

Aspects of undergraduate engineering students' understanding of mathematics P. GILL 557

A perspective on the relevance of complex numbers and conjugate linearity D. F. ALMEIDA 565

Classroom Notes

Geometrical solutions of quadratic equations A. S. GREWAL and L. GODLOZA 573

Probabilities for a triangular walk computed from an electrical analogue J. N. BOYD and P. N. RAYCHOWDHURY 580

Random chords across n-dimensional convex sets B. C. JONES and C. M. MANN 586

Matrix formulation of Horiuti's stoichiometric number for teaching linear algebra as a tool in chemistry T. MORIKAWA and M. KAZUI 592

Twenty-two infinite sums involving the sine and cosine functions R. S. MELHAM 595

A simple proof of the Fundamental Theorem of Algebra J. BYL 602

Electronic brain versus human brain W. B. FU 603

Figurate and pseudo-figurate numbers P. W. HAGGARD and R. E. GILHAM 608

An elementary proof of the fundamental theorem of algebra M. KOCHOL 614

Word juxtapoz—An innovative tool for promoting interest in mathematical education R. SUBRAMANIAM, N. K. GOH and L. S. CHIA 616

Recursive equations for lines and exponentials and their relevance in applications S. MOCHÓN 620

LEYENDEKKERS and A. G. SHANNON 627

Issue No. 5, SEPTEMBER

Articles

Challenging basic assumptions: mathematical experiences for pre-service teachers R. ZAZKIS 631

Set matrices F. A. A. GHOURABA and M. A. SEOUD 651

Enhancing mathematical problem-solving through ZENO H. MORRISON, P. COWAN, F. MCBRIDE and C. MCBRIDE 661

Branching processes and their application to chemical chain reactions F. USÓN-FORNIÉS... 675

Designing assessment tasks to accommodate students' cognitive skills in a technology-based mathematics course M. LINDSAY 691

Newton polynomials and a class of Diophantine equations L. BARONE and R. SPIGLER 699

Using concept maps to measure statistical understanding L. ROBERTS 707

An alternative solution algorithm for certain transportation problems V. ADLAKHA and K. KOWALSKI 719

Parameter estimation technique for generalized-ex tumour kinetics and practical use by clinical oncologists J. R. USHER and D. HENDERSON 729

Skew lines in R^3 V. K. SRINIVASAN 739

Classroom Notes

On extreme values for function with derivatives of all orders G. P. SPECK 747

Construction of maps with prescribed periodic orbits S. S. CHENG and J.-G. SI 750

Calculation of Green's function for the Jacobi differential equation E. CAPELAS DE OLIVEIRA and G. C. DUCATI 753

Characterization of convergence of series through termwise product by a monotone divergent sequence F. BENÍTEZ and F. JAVIER PÉREZ 759

Integrating factors for first-order differential equations F. CHORLTON 762

The area of polygonal regions via dot products D. R. HILL 765

Stationary and inflexion points—an interesting example from mechanics P. GLAISTER 768

Two approximations to π J. L. BONET, A. PLAZA and M. A. PADRÓN 782

A generalization of a result of Brillhart R. S. MELHAM 787

Articles

The teaching of numerical extensions: the case of negative numbers A. Bruno and A. Martinón 789

Inspiring exercises for undergraduates T.-C. Kuo 811

Similarity groups, geometry and symmetry M. A. M. Lynch and S. J. Fraser 823

An algorithm that translates intrinsic equations of curves into intrinsic procedures U. Armon 833

Resistive heating in an RCL circuit J. D. Logan 855

On properties of 3×3 semi-magic squares J. Gross, S.-O. Troschke and G. Trenkler 861

Specifying and simulating rotor machines using Maple G. P. McKeown 867

Energy and the nonsymmetric nonlinear spring T. H. Fay and S. V. Joubert... 889

A procedure approach to explorations in calculus M. Yerushalmy and J. J. Schwartz 903

Classroom Notes

An ingenious idea of George Green J. Farlow 915

Interesting bounds for the natural base Q. Yao 919

Inflection points and symmetry of polynomials P. Khalili 921

Refining the definition of indeterminate forms S. B. Elk 924

What students can learn from tables of basic distributions A. Kagan 928

A famous problem revisited V. K. Srinivasan... 934

Finite difference calculus and summation of series F. Chorlton 938
